## Foreword

Greetings, iris lovers. Another iris season is almost here. We hope to serve our old customers as well as many new ones during the coming season.

### About the garden

The Eden Road Iris Garden is a young garden. The ground where it is located was a wheat field in 1951. Come and see the progress we are making in changing and transforming this gently sloping hillside into a beauty spot. As time and money allows, we are adding rockeries, wind breaks, and shrubs and trees that fruit to attract the wild birds. The air is good and the view is fine. The garden is considerably larger than last year. Many older iris varieties have been discarded and replaced with newer and improved kinds. Many of these are listed in the catalog. There are more than 125 that are in short supply that are being grown here to increase stock, and are not listed in the catalog. These are not available here this year, but come and see them. Here are but a very, very few of them: Altar Light, Beacon Hill, Big Game, Bold Contrast, Bonnie Dundee, By-Line, Cape Cod, Caramel, Cream Chiffon, Crispette, Dark Boatman, Dark Chocolate, Defiance, Gay Head, Golden Crown, Great Day, Hallmark, Ice Carnival, June Meredith, Lady Rogers, May Hall, Native Dancer, Pepperpot, Phoebus Apollo, Pink Enchantment, Queen's Lace, Rehobeth, Sable Night, Sierra Skies, South Pacific, Tabu, Terrific, The Citadel, Topaz, Top Hat, Town Talk, Wide World, and Zulu Warrior. Let me repeat that these are not available here this year.

Lots of Guest Iris under name or number and seedlings under number from other hybridizers are growing here. Of my own hybridizing, there are hundreds of re-selected seedlings and thousands of row run seedlings, many of which will bloom for the first time, all under number. Come and see them. Help us pick out the ones to save. We can only save a few; the rest must be discarded to make room for new seedlings coming on.

See here, also, the named varieties of my own hybridizing that are scheduled for later introduction. Among these are Butterscotch Kiss, Gay Paree, Jungle Drums, Pretty Gay, Smithsonian, and Truly Fair.

Iris gatesii, not for sale here this year, bloomed here last season and was one of the highlights. This is the wild iris from Palestine and the parent of iris Wm. Mohr. We hope it will bloom again this year. We have seeds planted from its pollen. Ask to see the painting of it, on your visit, made here by the eminent local artist, Pauline Atkinson.

So come and visit the garden during blooming season. Garden is located at the end of Eden Road, four miles down river from East Wenatchee. Follow the signs.

I'll say a few words here about my chief helpers, Jim and Gerry Smith. Jim, 19, is attending Washington State College as a Sophomore. Gerry is now 15 and is in the 9th grade at East Wenatchee Junior High School. These brothers have worked for me for five years. Yes, they can answer most of your iris questions.

### About the catalog

Much research and checking has gone into forming this catalog. In the main variety list, after the variety name comes the hybridizer's name and the year the iris was introduced. Next comes the symbol for the season of bloom—E, M, L—signifying Early, Medium, and Late. After this in parenthesis is the breeding. Here look first for the capital "X." To the left of this is the pod parent. To the right is the pollen parent. This capital "X" is my own idea. In involved parentages, it is proving invaluable in helping to simplify and speed up reading of these lineages. Following the parentage is a brief description. Then comes the awards an iris has won.

A word about the awards may help you who are not A.I.S. members to understand them. H. C. (High Commendation) is an award given to a seedling iris, either under number or name, not introduced at time of judging. This is a recommendation that this variety is worthy of introduction. Next honor in line that an iris may win is the H. M. (Honorable Mention). Any iris that has been officially registered and introduced before the current July 10 is eligible for this award. Next comes the A. M. (Award of Merit). This award is given only to those iris that have won an H. M. not less than two or more than five years prior to the current season. The top award is the Dykes Medal. For a tall bearded iris to win this, it must first have won an A. M. during the previous four years. Mention should be made here, too, of the President's Cup award. This is given to the outstanding iris variety seen at each yearly convention of the A.I.S.

So keep in mind in reading this catalog that there is just one Dykes Medal awarded each year. There are 12 A. M.'s awarded each year (or more if a tie vote appears for 12th place). There is no limit to the number of H. M.'s awarded each year. A variety must receive 12 A.I.S. judges' votes to get this award. There were 52 H. M.'s awarded in the 1954 voting.

### About the stock

Washington grown rhizomes are tops, husky and full of life—ready to grow and bloom for you. Why not try them?

We can't bear it if we don't have your order.

## Cultural Directions for Bearded Iris

Rhizomes will be shipped to you in a firm condition and should be planted as soon as possible after they are received. If you are unable to plant on receiving them, then be sure and keep the rhizomes in a dry and cool place until you can plant them.

Your soil should be damp before planting and a good wetting after planting is usual, depending on weather conditions. After roots are well established, be careful and DON'T water too often. Bearded iris demand good drainage. If your soil is heavy and poorly drained, set the rhizomes a little higher than the surrounding soil. The rhizome should be planted so the soil just covers it and no more; be sure and spread the roots well and firm the soil around them. This will anchor the rhizome until the new roots form.

A small handful of bone meal to each plant well worked through the soil before planting is advised. In early spring a side dressing of WELL ROTTED manure produces beautiful blooms. Care must be taken not to allow any fertilizer to come in direct contact with the rhizome.

Separate your plants about every third year for best results.

## 1955 Introductions

**WITCH DOCTOR** (Plough) EL. 28 in. No. 47-6-5 (W-1 Cream Sdlg. X Capitola). Here is an early oncobred, strong and vigorous. The standards are blue-lavender with buffy-tan midrib. The falls from center down are a grayed-blue-lavender with buffy-tan haft and heart. Falls are faintly bordered with buffy-tan at bottom. The beard is yellow deep down fading out to blue at tip of beard. The flowers are as large as any iris in commerce, and this might be called an improved Conquest. This one is an eye-stopper and will give a long season of bloom. . . . . \$20.00

**CASINO** (Plough) EL. 40 in. No. 48-3 (Wm. Mohr X Firecracker). A huge rosy mulberry self (closest to Magnolia Purple o32/2 by Wilson). Falls have Mohr veining in an intricate pattern. The semi-flaring flowers are of very firm substance, very large with well rounded full form, and last for days. Beard is brownish-yellow. This one draws gasps from all who see it, and it is entirely different from anything on the market. \$15.00

**SAFARI** (Plough) ML. 30 in. No. 48-53-1 (Firecracker X Late Sunset). A fancy type washed and striated plicata done in warm brown. The heart of the flower has a golden glow. The standards are bright tan and are held flat. They have a cream ground with an all over wash of tan the color of the standards. There is a small light area at the tip of the yellow beard. This has pollen and is producing some interesting seedlings. . . \$10.00
